CERTIFLOW DETAILED PROCESS

🎯 Title: CertiFlow – AI Workshop Certificate Automation Using Microsoft Power Platform
📂 Purpose: Automate certificate generation, delivery, and tracking using Microsoft 365 tools (Forms, Excel, Power Automate, SharePoint, Outlook)

—

📄 Step-by-Step Procedure:

🟩 Phase 1: Setup – Microsoft Form for Registration

1. Open Microsoft Forms.
2. Create a new form titled “AI Workshop Registration.”
3. Add the following fields:
    - Full Name
    - Roll Number
    - Outlook Email
    - Event Name
    - Date (set default value)
4. Save the form and share the link for registrations.

📝 Outcome: Collected participant details via form.

—

🟩 Phase 2: Store Data in Excel (Forms for Excel)

1. Open OneDrive → New → Forms for Excel.
2. Select the same fields as above so form responses automatically update into an Excel file.
3. This Excel is used as the source in Power Automate.

📝 Outcome: Live Excel sheet with all form responses.

—

🟩 Phase 3: SharePoint Setup

1. Go to SharePoint → Create a Team Site (e.g., CertiFlow Site).
2. Create:
    - A Document Library (e.g., “Certificates”) → stores each participant’s certificate file

- A List (e.g., “Certificate Tracker”) → tracks participant details, status, and certificate link

📝 Outcome: Organized SharePoint site for document storage and status tracking.

—

🟩 Phase 4: Power Automate Flow – Certificate Automation

1. Open Power Automate → Create → Automated Cloud Flow.
2. Trigger: Manually or Scheduled.
3. Add “List rows present in a table” → Connect to Excel (Form responses).
4. Apply to each row:
    - Add Condition: If Participation Status = “Participated”
        - TRUE branch:
          a. Compose: Create HTML certificate using dynamic content
          b. Create file in SharePoint (.html or .docx)
          c. Get file content using path
          d. Send email with the certificate file as attachment
          e. Create item in SharePoint list (log details and link)
        - FALSE branch:
          a. Send email stating “Not participated”
          b. Create item in SharePoint list (log details without link)

📝 Outcome: Certificates are auto-generated, emailed, and logged.

—

🟩 Phase 5: Dashboard & Tracking

1. Filter Excel to get only “Participated” list.
2. Use Excel Pivot Table or Form summary to display:
    - Total Registrations
    - Number of Participants
    - Gender-wise/branch-wise stats (if applicable)
3. Optional: Add slicers or charts to visualize.

📝 Outcome: Dashboard to view and analyze participation data.

—

🟩 Phase 6: Testing & Result

1. Submit test responses to the form.
2. Run the Power Automate flow.

3. Check:
    - Email with certificate (for “Participated”)
    - Email without attachment (for “Not Participated”)
    - SharePoint document library: Certificate files stored
    - SharePoint list: Records created with links

📝 Outcome: Flow working successfully; automation complete.

—

📘 Final Result:

- Certificate generation is fully automated
- Emails are sent to participants individually
- SharePoint list logs complete data
- Reusable for any future event or workshop
